

Thanks for purchasing one of our kits, this kit requires scissors and a **GEL** Glue Collall.

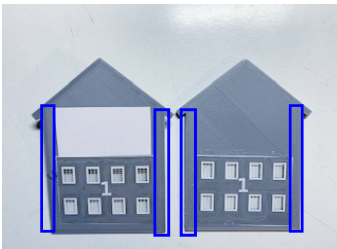

Glue all the card panels to the plastic walls both building 1 and building 2 as shown left..

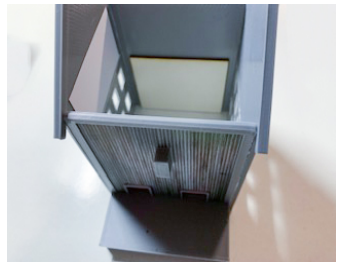

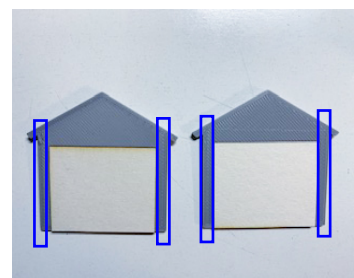

Cut the windows and doors out and glue to both buildings.

now glue the 4 card supports as shown left building 1 and right building 2, on building 1 you will notice one edge is angled, that is the top the supports fixes to the bottom.

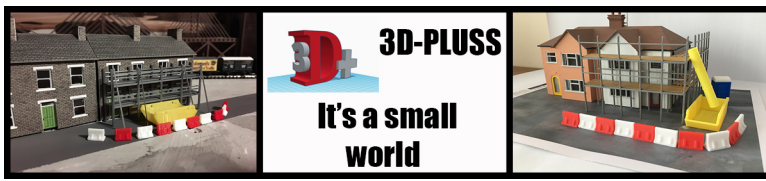

Run a line of glue to the inside of the panels shown B1 on left B2 on right, then leave to go tacky for a few mins.

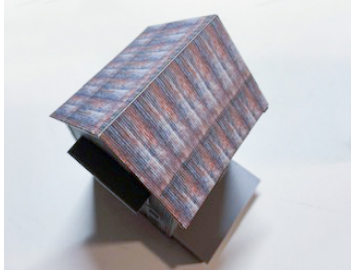

Now fix the walls together making sure they are nice and flush.

Now run a line of glue on top the supports and push the floor in place, this will help the building to become nice and square, do the same to building 2.

Thanks for purchasing one of our kits, this kit requires scissors and a **GEL** Glue Collall.

Now glue the roof to building 1.

Now glue the roof to building 2, decide which side of the roof you want the furnace as you can see on the gable the tunnel joiner.

Glue the bottom of the furnace push through the hole in the roof and it sits on the card floor.

Make sure when fitting the joining tunnel that it fits with no effort pushing especially if the walls are not set, if you push to hard this might move the walls and you will need to remove the roof.
