

Thanks for purchasing one of our kits, this kit requires scissors and a **GEL** Glue.

OO SCALE TOILET BLOCK PLASTIC EASY ASSEMBLY

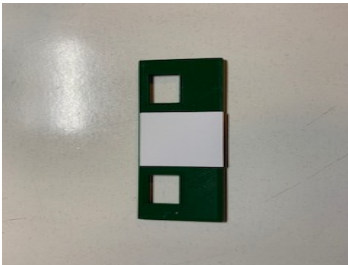

1/76

PhotoRoom®

Glue the two toilet signs to both gables and then the two small male and female signs to the front panel, check the doors to make sure they are the right side as the doors also have signs.

Glue the doors in place as shown right.

Cut the 4 windows out and glue as shown left, let them dry before the next step as the windows will slide when handling (speaking from experience).

Once dry glue the windows in place as shown right..

Glue the walls together, this is where Gel glue works really well as it instantly holds, note the gables are on the outside and the front and back are on the inside.

Run a line of glue on top of the two gables and along the edge of the front and back panels ready to fix the roofs, let the glue stand for a few minuets to get tacky then fit the two roof panels and square everything up. Please note each roof panel is angled on one edge to fit nicely together on the ridge, once it's held glue the green ridge strip in place.
